## **Chemical Seed Treater Type CT 1-10**

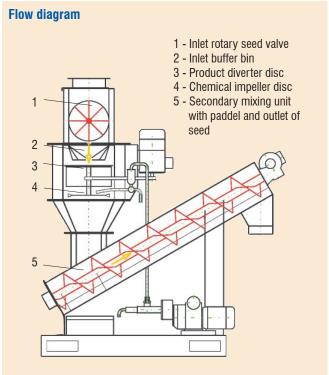

**PETKUS Chemical Seed Treater Type CT** (Coating Machines) are machines for the chemical treatment of seeds and fully tested for use with approved liquid and slurry chemicals.

### **Treating applications:**

- Most seed types including wheat, barley, oats and cotton,
- Other specialty seeds such as canola, sugarbeet etc.

### Advantages:

- Continuous and reliable operation.
- Easy handling and adjustment of the machine.
- Undoubtely and homogenuous mixing operation due to precise primary distribution of the chemical and effective mixing in the secondary mixing unit.
- Precise dosing of the liquid chemical (i.e. based on manufacturer recommended volume).
- Fine spraying of the chemical by use of the spraying disc, no blockage.
- Uniform distribution of the chemical on the seed corn based on multible and careful contact with the chemical liquid.
- Incorrect treatment of seed corn will be avoid due to integration of automatically control system by sensors.
- Preventing of intermixing in case of change of the seed products based on complete empty run of the machine and self cleaning function
- Solid and rigid construction of the machine.
- Totally closed construction
- Equipment with one pump for the chemical.
- Stainless steel for parts which are in touch with the chemical product.
- The compact design allows the machine to be easily installed in most seed plants.

#### **Operation process:**

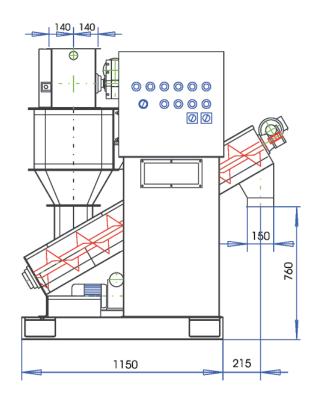

The seed is flowing through the inlet buffer by passing the rotary seed valve and wind aspiration into the treater machine. With the seed spraying disc the seed will be distributed in an uniform product veil. The chemical is feed into the treater by the pump and the chemical feeding system. The chemical liquid is distributed to the seed product by the rotating Impeller disc. In the secondary mixing unit the seed will be transported and it starts an intensive mixing with the chemical.

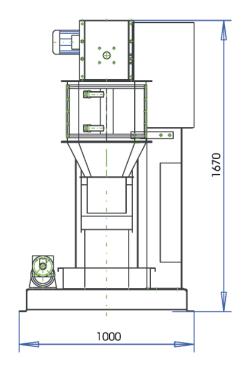

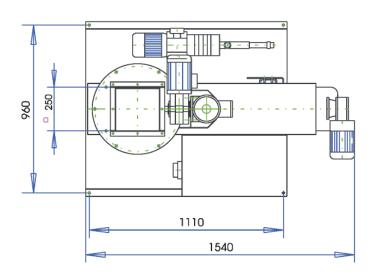

Control panel with Logo-process control equipment, standard equipment

# **Chemical Seed Treater Type CT 1-10**

Technical Data		CT 1-10
Capacity /Based on Wheat)	t/h	1 bis 10
Electrical drives		
Distribution disc	kW	0,55
Cleaning unit, (optional)	kW	0,18
Secondary mixing unit	kW	0,55
Pump	kW	0,55
Rotary seed valve	kW	0,75
Dosing of chemical liquid	ml/100kg	150 - 800

Technical Alteration reserved.
