

# Indented Cylinder Separator Type TK/TL

**Short grain separation**

**Long grain separation**

**PETKUS Indented Cylinder Separators** are processing machines for sorting and separating granular products according to the particle length.

#### Application:

- seed cleaning of all kinds of cereals, wheat, oats, rye, grain, corn, sorghum, rice, others.
- in mills and malting industry for processing and sorting of wheat, rye, oats, barley and paddy.

The PETKUS Indented Cylinder Separators can be used for:

- Short grain separation (TK) - The shorter grain within the product settle down into the indents. By turning the cylinder these short grains are discharged into the discharge trough. The trough settings can be adjusted during operation with the short grain being discharged by a screw conveyor mounted in the trough.
- Long grain separation (TL) - The product settle into the indents. By turning the cylinder it is thrown into the trough. The long grain components which have to be separated from the product do not settle into the indents and pass through the cylinder to the discharge.

#### Construction:

- compact steel construction
- dust proof construction
- precision indents
- vibration free
- separate drives for each cylinder
- trouble free operation
- maintenance free bearings
- low noise level
- easy adjustment
- multiple separated cylinder segments
- sample points for checking the separation result

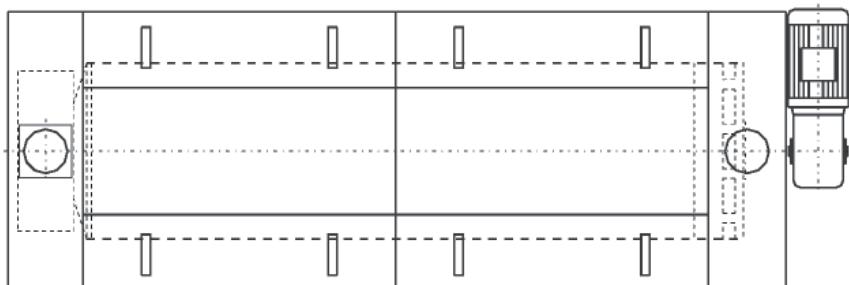

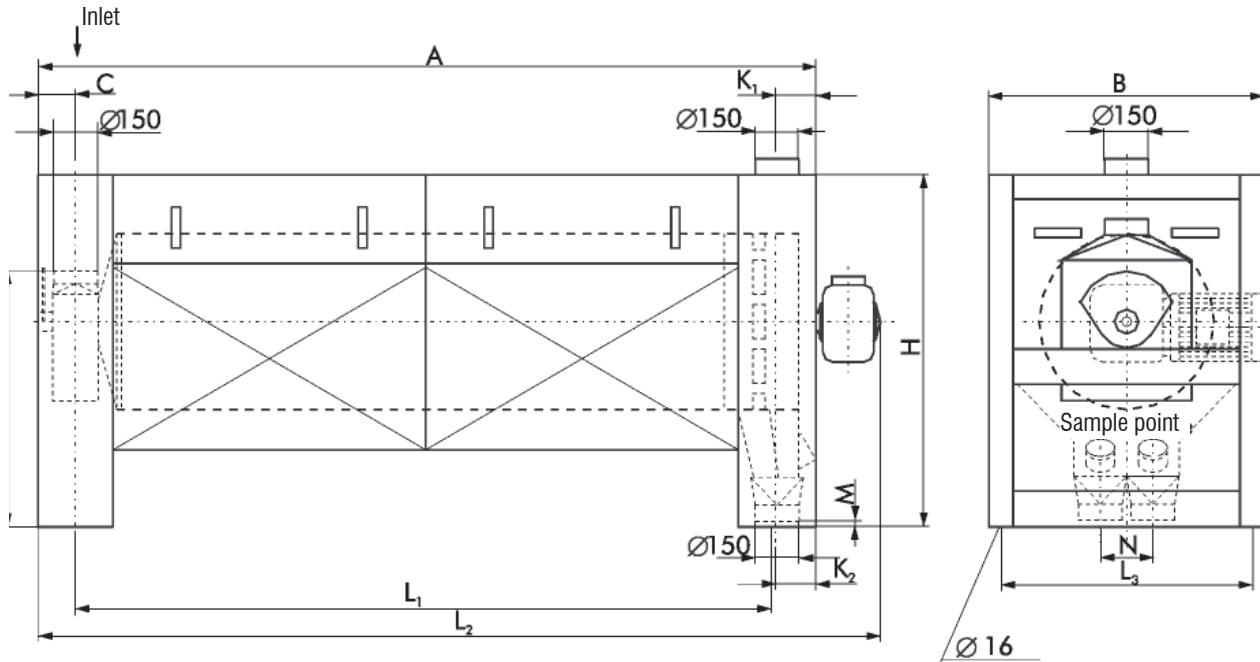

#### Description:

The PETKUS Indented Cylinder TK and TL are completely enclosed machines consisting of one indented cylinder with indents in the form of pockets and a discharge trough with screw.

The indented cylinder is provided with indents designed to suit the particular separation needs of each product. The adjustment of the trough and the selection of the respective indent size is important for the result and quality of the separation.

Type	Type	Capacity Wheat with 3% Impurities	Diameter	Cylinder Length	Motor	Revolution	Aspiration		Weight	No. of segment
TK	TL	t/h	mm	mm	kW	U/min	m <sup>3</sup> /min		Pa	kg
615	615	3,0	600	1500	1,1	41	8		90	600
620	620	4,0	600	2000	1,1	41	8		90	610
